## Vertical Blind Measuring & Ordering Instructions

### Selecting the Type of Mounting:

Determine whether the blind is going to be installed inside the window frame or outside the window frame.

### Inside Mount (IB):

Inside mount installations are often preferred because the blinds take up less space in the room.

### Measuring the Width and the Length for Inside Mount:

For the width, measure across the top, middle, and bottom of the window opening. Using the narrowest dimension, measure to the nearest 1/8". By using the narrowest measurement the blind will operate correctly.

For the length, measure the up and down dimension on the left, center, and right side. Use the shortest length measurement, measuring to the nearest 1/8".

The factory will make any appropriate deductions. Do not make any width or length deductions.

### Outside Mount (OB):

Outside mount installations are mounted on the wall or on the window molding. It is best to overlap the window opening at least 3" on each side when measuring for vertical blinds.

### Measuring the Width and the Length for Outside Mount:

Measure the area that the blind is to cover. For vertical blinds it is recommended to overlap the window opening by at least 3" on each side for a total of 6". To allow for enough space for the mounting brackets, it is also suggested that a vertical blind be installed at least 3" above the window opening.

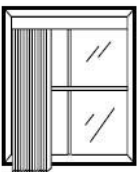

*Note: When outside mount blinds are specified, no factory deductions are taken from the overall "Window Size" indicated. However, a factory deduction will be taken to allow for the headrail and carrier length as well as for the valance if applicable. If exact size vane length is required then "Exact Size" and NET vane length must be indicated at the time of order to prevent any additional deduction from being taken.*

### Confirming Measurements:

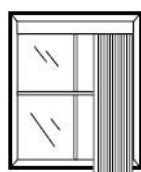

The most common error in ordering blinds is reversing the width and the length measurements. Always confirm that the width is the measurement that goes across from left to right and that the length is the measurement that goes from top to bottom.

### Louver Stacking Options:

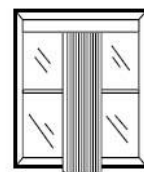

Left Stack

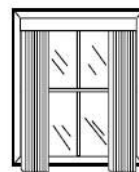

Right Stack

Center Stack

Split Stack

### Vane Replacements:

Vane replacements are available and each replacement price is listed at the end of the tables. Always measure the length of the vertical and request "VANES ONLY" and indicated "EXACT SIZE" if no deduction is to be taken.

**Minimum Width: 5"**

**Minimum Height: 8.5"**

**Maximum width: 192"**

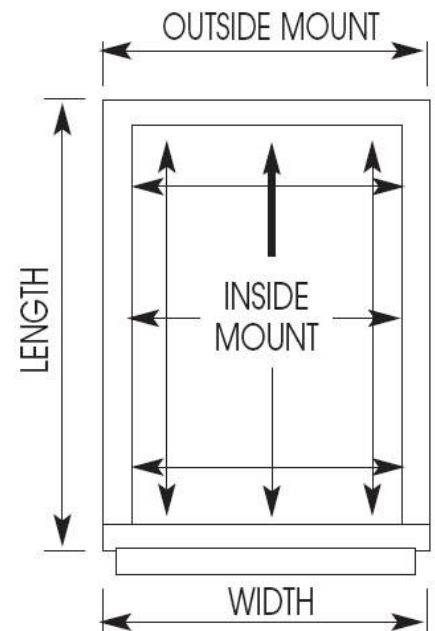

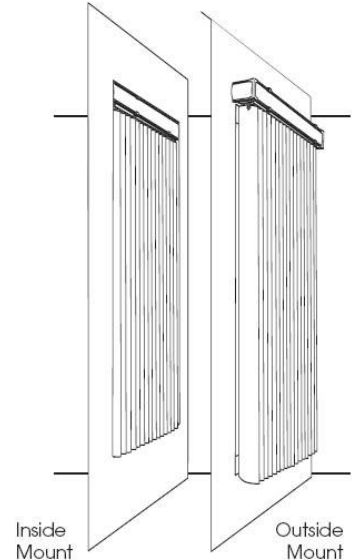

**Maximum height: 144"**

### Fabric Hems:

All fabric hems are custom sewn.

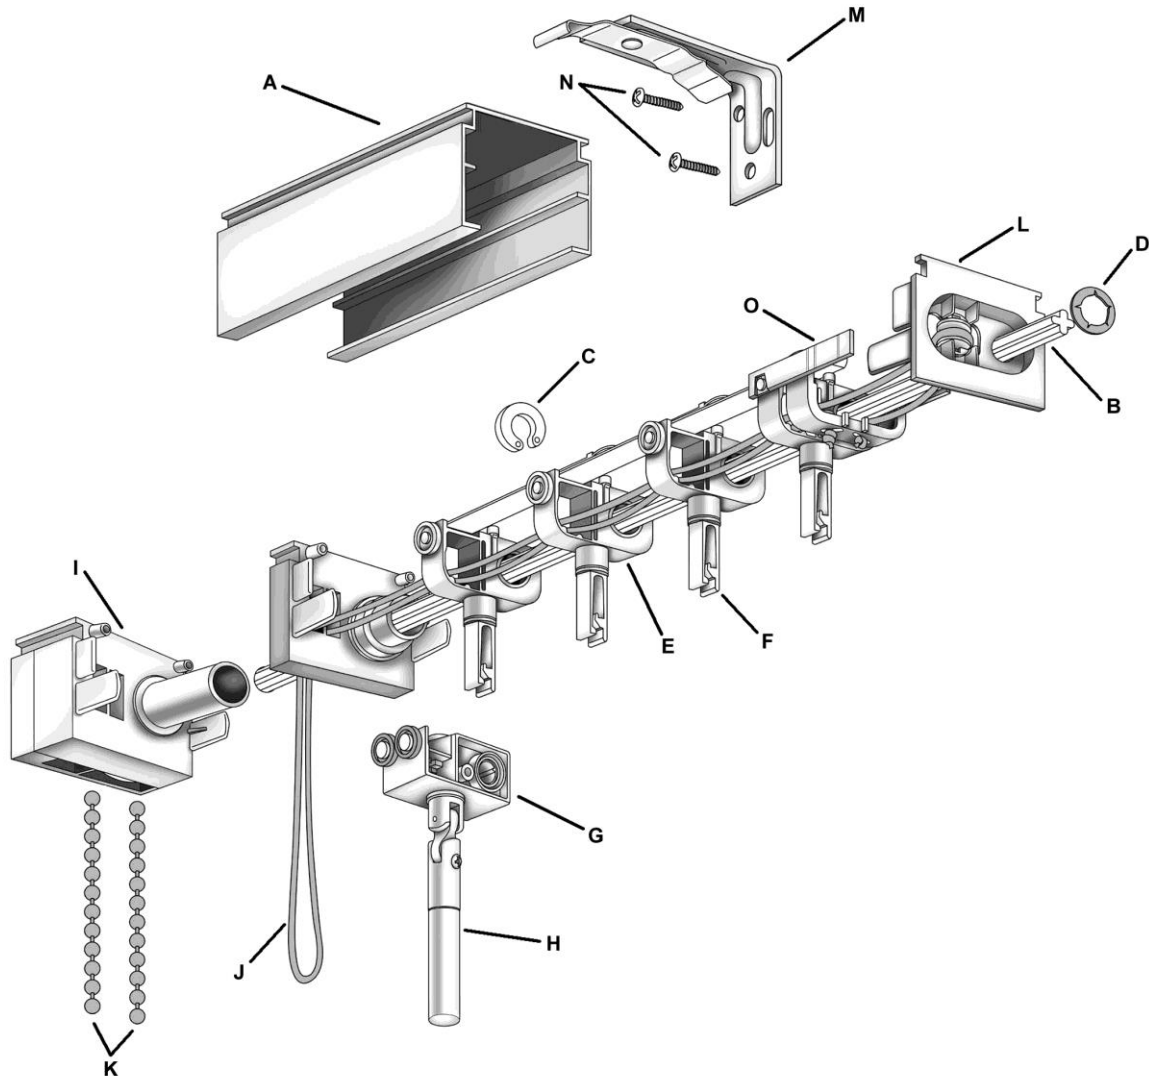

### Corner Blinds:

When ordering corner blinds, dealer must make all deductions. Factory will not be responsible for such deductions.
